Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	10/724,384	LEATHER ET AL.	
Examiner	Michelle K. Lay	Art Unit	2628

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 07 November 2007.

2a) This action is **FINAL**. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1,4-9,12-17 and 20-25 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) 1,4-9,12-17 and 20-25 is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)
2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____

4) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____

5) Notice of Informal Patent Application

6) Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/07/2007 has been entered.

Response to Amendment

The amendment filed 11/07/2007 has been entered and made of record. Claims 2, 3, 10, 11, 18, and 19 have been cancelled. Claims 1, 4-9, 12-17, and 20-25 are pending.

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 4-9, 12-17, and 20-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosman et al. (6,222,550 B1) in view of Blythe et al. (2002/0145612 A1) and Sperber et al. (6,557,083).

Rosman teaches the limitation of claim 1, 4-9, 12-17, and 20-25 with the exception explicitly teaching a single graphics chip and defining tiles of the output screen. However, Sperber teaches an integrated-circuit die in which a processor core and graphics core are integrated on a single chip and Blythe teaches dividing the frames into subareas that are allocated to different rendering pipelines.

In regards to claims 1, 9, 17 and 25, Rosman teaches a 3D graphics processor having parallel pipelines. A hardware accelerated Geometry Engine (said *front-end*) may supply the vertices of triangles to triangle setup engine (28) [c.6 L.25-32]. The triangle setup engine (28) [Fig. 3] directs the gradients and vertices to the triangle pixel-pipelines (40,41) (said *directing said geometry into pipelines*) [c.6 L.33-35]. Once a triangle is setup by triangle setup engine (28), its gradients and vertices are sent to the next available triangle pixel-pipeline(s) (40,41) (said *back-end*). Triangle pixel-pipelines (40,41) are each pixel engines (PE) that receive the three vertices for a triangle. Triangle pixel pipelines (40,41) output pixel values to a frame buffer [c.6 L.33-45].

Blythe teaches a geometry distributor (102; Fig. 1) that divides the compositing window (said *output screen*) into subareas (said *tile*) and conveys the defining

parameters to each of the PGUs (108) (said *pipelines*) [0071]. Additionally, PGU assignor (204) assigns one or more PGU (108) to each of the subareas [0072]. It would have been obvious to one of ordinary skill in the art to tile the output screen of Rosman because the spatial compositing increases the rate at which an overall frame is rendered [Blythe: 0046].

Sperber teaches an integrated-circuit die in which a processor core (310) and graphics core (320) are integrated on a single chip [Fig. 3; c.4 L.20-35].

Therefore, it would have been obvious to one of ordinary skill in the art to implement the modified Geometry Engine of Rosman in view of Blythe into the processor core of Sperber, and the pixel-pipelines of Rosman into the graphics core of Sperber because it is known in the art that significant amount of rendering causes a burden on the bandwidth of the memory channel, which in turn can reduce the performance of the graphics system. Furthermore, memory demands by the graphic engine can reduce CPU performance, as well as other units [Sperber: c.2 L.13-31]. Thus, by implementing both the front-end and back-end of Rosman on a single chip, the interfaces between units are reduced in size, resulting in a faster interaction. Additionally, the single chip occupies less real estate within the system, therefore providing either a smaller system overall, or more space for other internal devices.

In regards to claims 4, 12, and 20, Rosman teaches FIFO (32) buffers [c.6 L.55-60].

In regards to claim **5, 13, and 21**, Rosman teaches a raster engine (34) (said, *rasterizer*), span engine (30) (said *scan converter*), register (42) stores triangle attributes (said *texture unit*), registers (42,44) include shadow register (said *unified shader*) [c.6 L.46-64]. Furthermore, one or more triangle setup engine(s) receives triangle primitives from a host or geometry engine and generates vertex color, texture and other attributes as well as their gradients [abstract].

In regards to **6, 14, and 22**, Rosman teaches z-buffering [c.6, L.65-68]. Additionally, the method/system of Rosman generates pixel colors and writes the colors into a buffer (said *color buffer*) [c.4 L.1-13].

In regards to claims **7, 8, 15, 16, 23, and 24**, the 3D graphics processor of Rosman generates vertex color, texture and other attributes as well as other gradients. Rosman further teaches utilizing multiple rendering pipes. It would have been obvious to one of ordinary skill in the art that the implicit z-buffer as utilized by Rosman needed to perform depth functions would function with the shader and the scan converter in order to generate a single 3-D display. Furthermore, the “early” and “late” z-interface is within the same z-buffer, Thus the “early” and “late” z-interface is dependent and defined on the step process that the generation occurs.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michelle K. Lay whose telephone number is (571) 272-7661. The examiner can normally be reached on Monday-Friday 7:30a-5p.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kee M. Tung can be reached on (571) 272-7794. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
